

**E**arth is a planet we all live on.

**A**round the solar system there are lots of other planets with no life upon.

**R**otation is important because if the planets do not rotate then one planet will be so hot whilst others are freezing cold.

**T**he Earth is next to two planets - on the left is Venus and on the right is Mars which is very bold.

**H**alley's Comet is a famous comet that visits Earth every 75 years. It is visible to the human eye.
